PRODUCT DESCRIPTION

20th Century Wooden Castle Turret Model with Interior Illumination A finely crafted 20th-century wooden model of a castle turret, constructed in alternating bands of light and dark hardwoods, creating a striking striped effect. The cylindrical tower is detailed with a crenellated battlement at the top, beneath which are deeply carved arcaded arches, a small arched window, and a front entrance framed by a detailed archway surround. The top surface is inlaid with a compass rose design in contrasting woods, a testament to the artisan's mastery of marquetry. Electrified from within, the turret is fitted with concealed interior lighting, allowing the windows and doorway to glow when illuminated — enhancing both its architectural realism and decorative presence. Likely conceived as a decorative object or architectural model, the piece demonstrates exceptional craftsmanship and attention to detail, uniting function and artistry in equal measure. Dimensions: Diameter 14.25" × Height 20.25"
