CELESTIAL LIGHT: MOUNTED BLUE CELESTITE FORMATION

SKU: SM110M

Categories: [Mineral](#), [Natural Specimens](#)

PRODUCT DESCRIPTION

Mounted Blue Celestite Specimen — A striking geode formation showcasing an abundance of translucent to sky-blue celestite crystals radiating from a natural cavity within a rough, pale grey matrix. The crystals exhibit well-defined orthorhombic structures with glassy luster and varying depths of color, from delicate icy tones to deeper slate-blue. The geode is securely mounted on a custom black metal display stand, allowing for optimal viewing and stability. Celestite, prized both for its ethereal beauty and metaphysical associations with clarity and calm, is found in sedimentary rock formations and is often associated with strontium deposits. Dimensions: 4" depth × 6" width × 10.5" height (including stand).
