

CREEL AND GOW

MEGALODON TOOTH

SKU: SH103

Categories: [Natural Specimens](#), [Oceanic](#),
[Gift List](#)

PRODUCT DESCRIPTION

Megalodon teeth have been discovered along the Gulf coast, providing evidence of the existence of this extinct species of shark. The megalodon, considered one of the largest and most formidable predators to have ever existed, roamed the oceans approximately 23 to 2.6 million years ago. Fossil records indicate that this colossal shark could grow up to 18 meters (59 ft) in length, making it larger than most known shark species today. Despite its extinction, the megalodon continues to fascinate scientists and the public alike, providing valuable insights into the evolution and diversity of marine life. Approximately 3.5" x 4" x 1"H
