LARGE SEA LILY FOSSIL

\$20,000.00

SKU: SM292

Categories: [Fossils](#), [Oceanic](#), [Nature](#)

PRODUCT DESCRIPTION

Large Sea Lily Fossil. 54" x 30". From Germany. Naturally set within a slate-like stone slab. Wall mountable. This fossil dates back to the lower Jurassic period which means it is approximately 200 million years old. The Sea Lily or Feather Star is a "living fossil." These living species are still found in today's oceans in a remarkable range of depths from Indonesia all the way to the Caribbean. See Also: Tortoise Shell Fossil
