SEPTARIAN DRAGON EGG: NATURE'S CRYSTAL TREASURE

SKU: sm900_SE

Categories: [Carved Specimens](#), [Mineral](#)

PRODUCT DESCRIPTION

This stunning Septarian Egg is a naturally occurring geode formed over millions of years through a unique blend of minerals, including calcite, aragonite, and limestone. Known for its striking cracked patterns and warm golden crystal formations inside, Septarian nodules originated from ancient seabeds, where sediment and organic matter created these fascinating geological formations. The egg-shaped polish enhances its intricate veining and crystalline interior, making it a captivating display piece for collectors, crystal enthusiasts, or those drawn to the beauty of natural wonders. Measures: 4.5" Wide x 6.75" Height
