\$6,000.00

SKU: dec6_psf

Categories: [Mineral](#), [Natural Specimens](#)

PRODUCT DESCRIPTION

Pecten latissimus Fossil on Wooden Base. This extraordinary fossil specimen showcases a stunning group of Pecten latissimus, or scallop shells, beautifully preserved and mounted on a custom wooden base. Discovered in the limestone rock of the South of France, these fossils capture the intricate details and natural elegance of prehistoric marine life. Pecten latissimus, a species with roots tracing back to the Carboniferous period over 350 million years ago, serves as a bridge between ancient and modern eras, with its descendants still inhabiting the oceans today. What makes this piece particularly remarkable is its rarity and provenance. Fossil collection from its original site is no longer permitted, making it a unique and irreplaceable artifact. The preservation quality, with its sculptural-like arrangement, transforms this natural history treasure into an artful display that combines scientific significance with aesthetic appeal. Measuring 14" x 8" x 20" H, this fossil is not only a testament to the evolution of life on Earth but also a captivating addition to any collection or interior space, offering a tangible connection to the ancient past.
